

Method Statement

Description of the Task/Activity:	General landscape maintenance works (grass cutting, hedge trimming and general works)						
Site Address/	Start Date/Time:						
Location:			Finish Date/Time	:			
	Name		Role/Trade				
Personnel involved:							
Works Supervisor:		Role:	Works Supervisor	Tel:			
Key Plant and Tools Required:	 Petrol lawn mower Petrol strimmer Petrol hedge trimm Petrol blower Shears Yard brush All electrical equip Mini digger / dump Ride on mower Tractor / gang mov 	ner ment mus per	t be 110v or less				
Key Materials Required:	Unleaded PetrolDieselHerbicide						
Other Essential Equipment:	 First aid kit Hearing protection Gloves Safety footwear with Eye/face protection Warning signage at Bulk bag (for the comparison of the comparison	ith non-slip n and road c		e cuttin	gs etc)		

	Groundforce
Specific Identified Residual Hazards:	 Please refer to the attached risk assessments. However, the key hazards are: Manual handling Use of power tools Slips, trips and falls Interface with members of the public Working adjacent to the public highway Use of hazardous chemicals
Specific Staff Training Requirements:	 Exposure to the sun/sunburn/heat stroke All operatives are to be competent and experienced landscape maintenance operatives. All trainees and apprentices will work under the direct supervision of a competent senior operative. All staff are to receive information and instruction on the content of this method statement and the attached risk assessments. All staff are to receive a site safety induction prior to the commencement of works. All staff using power tools are to have received suitable and sufficient training in the use of the equipment. Only those considered competent to use such equipment shall be permitted to operate such tools. All staff are to receive training on safe manual handling techniques and highway safety training.

 Sequence of Operations: Safely re-fuel equipment where needed, taking care to avoid spilling fuel onto hot exhausts or other ignition sources. Safely re-fuel equipment where needed, taking care to avoid spilling fuel onto hot exhausts or other ignitions and recommendations. Safely re-fuel equipment where needed, taking care to avoid spilling fuel onto hot exhausts or other ignition sources. Prior on all necessary safety/personal protective equipment as specified in the relevant risk seesement(s). Coff load all equipment needed, make all necessary states that the equipment as specified in the relevant risk assessment(s). Safely re-fuel equipment needed, taking care to avoid spilling fuel onto hot exhausts or other ignition sources. Put on all necessary safety/personal protective equipment as specified in the relevant risk assessment(s). Lock away all unneeded equipment, including spare fuel and herbicides etc. Move lawn mowers, Strimmers and hedge trimmers away from roads and footpaths and start their engines in accordance with the manufacture is not damaged and is safe to use. Lock away all unneeded equipment, including spare fuel and herbicides etc. Move lawn mowers, Strimmers and hedge trimmers away from roads and footpaths and start their engines in accordance with the manufacture is recommendations. Stass Cutting All grass cutting will be carried out in a systematic and controlled manner. The area of grass to be cut will be checked as the works progress to ensure that their engines in accordance is of such materials include: stones, bould be clear away from the path of the lawn mower. Small creas of grass around trees, fences, hedges and other features should be timmed using a stimmer. The operator should not at any time need to stand within the road whilst cutting the grass and he should not leave the		LANDSCAPE LIMITED
 warning lights and strobe lights flashing to warn others in the area. Prior to the start of works, where applicable erect all necessary safety warning signs and road cones. High Visibility Clothing conforming to BS EN471:1994, Table 1, Class 3, which must be worn at all times whilst working on or adjacent to the public highway, it will comply with the requirements of Clause 4.2.3(b) in all cases. Jackets with sleeves in accordance with Clause 4.2.3(b) in all cases. Jackets with sleeves in accordance with Clause 4.2.3(b) in all cases. Jackets with sleeves in accordance with Clause 4.2.3(b) in all cases. Jackets with sleeves in accordance with Clause 4.2.3(b) in all cases. Jackets with sleeves in accordance with 2.4 and to Class 3 must be worn on dual carriageway roads with a speed limit of 40 mph or above. The colour of the background material should normally be fluorescent yellow from table 2 of BS EN471:1994, and the retroreflective material should comply with Table 5. Off load all equipment needed, make all necessary checks to ensure that the equipment and herbicides shall be used and applied in strict accordance with the manufacturer's instructions and recommendations. Safely re-fuel equipment where needed, taking care to avoid spilling fuel onto hot exhausts or other ignition sources. Put on all necessary safety/personal protective equipment as specified in the relevant risk assessment(s). Lock away all unneeded equipment, including spare fuel and herbicides etc. Move lawn mowers, Strimmers and hedge trimmers away from roads and footpaths and start their engines in accordance with the manufacturer's recommendations. Crass Cutting All grass cutting will be carried out in a systematic and controlled manner. The area of grass to be cut will be checked as the works progress to ensure that there is no debris or other materials. All such debris should be trimmed using a stimmer.		tenant(s)/owner(s) of the properties in advance of the start date to
 Warning signs and road cones. High Visibility Clothing conforming to BS EN471:1994, Table 1, Class 3, which must be worn at all times whilst working on or adjacent to the public highway. It will comply with the requirements of Clause 4.2.40 in all cases. Jackets with sleeves in accordance with Clause 4.2.40 in all cases. Jackets with sleeves in accordance with Clause 4.2.40 in all cases. Jackets with sleeves in accordance with Clause 4.2.40 in the public highway. It will comply with the requirements of Clause 4.2.40 in all cases. Jackets with sleeves in accordance with Clause 4.2.4 and to Class 3 must be worn on dual carriageway roads with a speed limit of 40 Class 3 must be worn to all carriageway roads with a speed limit of 40 Class 3 must be worn table 2 of BS EN471:1994, and the retroreflective material should comply with Table 5. Off load all equipment needed, make all necessary checks to ensure that the equipment is not damaged and is safe to use. All equipment and herbicides shall be used and applied in strict accordance with the manufacturer's instructions and recommendations. Safely re-fuel equipment where needed, taking care to avoid spilling fuel onto hot exhausts or other ignition sources. Put on all necessary safety/personal protective equipment as specified in the relevant risk assessment(s). Lock away all unneeded equipment, including spare fuel and herbicides etc. Move lawn mowers, Strimmers and hedge trimmers away from roads and footpaths and start their engines in accordance with the manufacturer's recommendations. Grass Cutting All grass cutting will be carried out in a systematic and controlled manner. The area of grass to be cut will be checked as the works progress to ensure that there is no debris or other materials. All such debris should be clear away from the path of the lawn mower. Small areas of grass around trees, fences, hedges and other fea		
 which must be worn at all times whilst working on or adjacent to the public highway. It will comply with the requirements of Clause 4.2.3 (b) in all cases. Jackets with sleeves in accordance with Clause 4.2.4 and to Class 3 must be worn on dual carriageway roads with a speed limit of 40 mph or above. The colour of the background material should normally be fluorescent yellow from table 2 of BS EN471:1994, and the retroreflective material should comply with Table 5. Off load all equipment needed, make all necessary checks to ensure that the equipment is not damaged and is safe to use. All equipment and herbicides shall be used and applied in strict accordance with the manufacturer's instructions and recommendations. Safely re-fuel equipment where needed, taking care to avoid spilling fuel onto hot exhausts or other ignition sources. Put on all necessary safety/personal protective equipment as specified in the relevant risk assessment(s). Lock away all unneeded equipment, including spare fuel and herbicides etc. Move lawn mowers, Strimmers and hedge trimmers away from roads and footpaths and start their engines in accordance with the manufacturer's recommendations. Grass Cutting All grass cutting will be carried out in a systematic and controlled manner. The area of grass to be cut will be checked as the works progress to ensure that there is no debris or other materials. All such debris should be clear away from the path of the lawn mower. Small areas of grass around trees, fences, hedges and other features should be trimmed using a strimmer. The operator should not at any time need to stand within the road whilst cutting the grass and he should not leave the lawn mower unattended at any time. 		
 that the equipment is not damaged and is safe to use. 6. All equipment and herbicides shall be used and applied in strict accordance with the manufacturer's instructions and recommendations. 7. Safely re-fuel equipment where needed, taking care to avoid spilling fuel onto hot exhausts or other ignition sources. 8. Put on all necessary safety/personal protective equipment as specified in the relevant risk assessment(s). 9. Lock away all unneeded equipment, including spare fuel and herbicides etc. 10. Move lawn mowers, Strimmers and hedge trimmers away from roads and footpaths and start their engines in accordance with the manufacturer's recommendations. Grass Cutting 11. All grass cutting will be carried out in a systematic and controlled manner. The area of grass to be cut will be checked as the works progress to ensure that there is no debris or other materials that cause a hazard to the operator or others in the area, examples of such materials include: stones; bottles; cans; sticks; bricks and other materials. All such debris should be clear away from the path of the lawn mower. 12. Small areas of grass around trees, fences, hedges and other features should be trimmed using a strimmer. 13. The operator should not at any time need to stand within the road whilst cutting the grass and he should not leave the lawn mower unattended at any time. 		which must be worn at all times whilst working on or adjacent to the public highway. It will comply with the requirements of Clause 4.2.3(b) in all cases. The area of grass to be cut will be checked as the works progress to ensure that there is no debris or other materials that cause a hazard to the operator or others in the area, examples of such materials include: stones; bottles; cans; sticks; bricks and other materials. All
cutting the grass and he should not leave the lawn mower unattended at any time. 14. Do not operate the machinery in close proximity to members of the		
		cutting the grass and he should not leave the lawn mower unattended at

	15. Take care to ensure that children and animals are not scared by the equipment, or that they do not approach the equipment.
	16. When refuelling the lawn mower, a proper fuel can and filler tube should be used to help avoid spillages and the lawn mower must be turned off.
	Ride on Mowers / Grass Cutting Tractor
	17. Check that the mower is in good operating order. Make sure blades are sharp, all nuts and bolts are tight, safety guards are in place, the motor is running smoothly, the brakes are working and that all operator controls are working correctly. In addition, ensure that the Rollover Bar, seatbelt and any warning devices such as flashing lights and reversing sounders are operating.
	18. Ensure all operations near to highways are adequately signed with the appropriate notices as specified in the DTLR Code of Practice Safety at street works and road works. The minimum acceptable signage "Caution, Grass cutting" should be placed at each end of the work area and must be moved along with the works.
	19. Low hanging branches and similar obstacles can injure the operator or interfere with the mowing operation. Before mowing, identify potential obstacles such as low hanging branches and trim, remove or avoid those obstacles.
Sequence of Operations:	20. Study the area to be mown and establish a safe mowing pattern. Do not mow where traction or stability is doubtful.
	21. Check colleagues and members of the public are at a safe distance away from you, which is more than 15m, (or as close to this as possible).
	22. The drivers daily check sheet must be completed each time the mower is used.
	23. Do not carry passengers.
	24. Look out for pedestrians whilst operating the mower, stop the engine if any pedestrians approach the mower.
	25. Guards and shields (PTO, belts etc) must be in place before operating the mower.
	26. The cutting blade should always be switched off as soon as cutting is finished and before moving across any surface other than grass.
	27. The mower should only be operated in daylight conditions or good artificial light.
	28. Watch out for traffic when crossing or working near roadways.
	29. Never direct discharge of material towards pedestrians or allow anyone near the machine while in operation.

- 30. Never alter the engine governor settings or allow the engine to over-rev, operating the engine at excessive speed can increase the potential for personal injury or mechanical damage.
- 31. Always mow up and down a slope, never across the face of the slope. Do not mow a slope with wet grass, tyres may lose traction on wet slopes even if your brakes are functioning correctly. Avoid starting, stopping or turning on a slope. If the tyres lose traction disengage the blades and proceed slowly, straight down the slope. Keep all movement on slopes slow and gradual. Do not make sudden changes in direction which could cause the machine to roll over.
- 32. The Roll Over Protection System fitted to the mower must be in the upright/ deployed position at all times. Do not drop the ROPs to cut around trees, if low branches restrict access with the mower then either remove the branches or cut around the tree utilising an alternative method of working. Make certain all parts of the ROPs are installed correctly, if the ROPs structure is loose or defective do not take the machine out and inform your Supervisor immediately. Always wear your seat belt when the ROPs is deployed.
- 33. When finished, clean debris from all attachments, either through the use of a blower or by jet washing. Clean air intake screen and radiator/oil cooler fins. Check for loose, missing or damaged parts.

Strimming

- 34. Only experienced trained operatives shall be permitted to use Strimmers/brush cutters.
- 35. Strimming is to be carried out in a systematic manner moving the head of the strimmer from side to side as the operative walks forward.
- 36. The head of the strimmer must be kept away from the body of the operative at all times and the cutting head must be fitted with a suitable rigid guard.
- 37. Never move the cutting head towards another person.
- 38. Do not use when in the vicinity of children or animals.
- 39. Care must be taken to ensure that no objects are hidden in the grass that can be hit by the cutting head and then ejected at high speed into the surrounding environment.
- 40. Always ensure that the strimmer if turned off when not in use and whenever adjustments need to be made to the cutting head/line

Hedge Cutting

- 41. Hedge trimmers must be used with great care and only experienced trained operatives shall be permitted to use them.
- 42. When using a hedge trimmer always start at one end and work your way along the hedge with the hedge trimmer always be in front of you at full arms length.

- 43. The hedge trimmer should be moved in an upward motion to reduce the risk of an uncontrolled movement bring the trimmer towards the operatives body unexpectedly.
- 44. Step ladders and trestles etc will not permitted be permitted for use whilst hedge cutting, if the hedge is too high to reach from the ground, a long reach pole based hedge trimmers will be used.
- 45. All hedge trimmings should be collected together and placed into a bulk bag for subsequent shredding/disposal off-site.

Hedge Cutting with Tractor Side Arm Flail

- 46. Operators should receive adequate instructions and training to enable them to use the machine safely.
- 47. Make sure the operator reads, understands and follows the instruction manual. Follow the manufacturer's instructions when hitching or unhitching the machine from the tractor. Do not stand in any position where you may be at risk of being crushed, eg in the area between the back of the tractor and the cutter.
- 48. Make sure the machine is left in a stable position when it is removed from the tractor, using any stands or props provided, and securing it further if necessary.
- 49. Do not carry out maintenance on the hedge cutter with the cutting arm/dipper arm raised, unless the arm is properly supported.
- 50. Check the tractor is at least the minimum weight recommended by the hedge cutter manufacturer. Use ballast as necessary.
- 51. Inspect the hedge before starting to cut and remove wire, bottles, cans and other debris. Check for any telegraph/electricity pole stays. Damaged stays should be reported to the relevant Telecoms Company/Distribution Network Operator.
- 52. Use appropriate warning signs to alert others to the hedge-cutting operation where necessary.
- 53. Work at a safe speed, taking account of the conditions (eg terrain, proximity to the highway, or obstacles).
- 54. Use safe practices when work needs to be done near OHPLs. Flailhead units on some dipper arms can reach over 5.2 metres, the minimum height of OHPLs above ground level.
- 55. Clear up debris after cutting if it could be a hazard to others.

Tree Surgery Works

56. All tree surgery works will be carried out by a suitably qualified and experienced tree surgeon. All works will be carried out to industry best practice and will be in accordance with BS3998.

- 57. No materials that are likely to have an adverse effect on tree health such as oil, bitumen or cement will be stored or discharged within 10 metres of the trunk of a tree that is to be retained.
- 58. No fires will be permitted on site and all arising's will be removed from the site as they are generated, or chipped to produce mulch which may be retained on site or removed from the site.
- 59. Assess tree for risks (e.g. phone lines, decay in tree, buildings, etc.)
- 60. All tree work should be carried out in accordance to British Standard 3998; latest arboricultural best practise and comply with all relevant statutory requirements. The work should be carried out by suitably qualified professional arborists. They should hold all relevant insurances and certificates of competence that will be required for the specified work. All debris generated by the tree work shall be removed from site and disposed of in an environmentally sustainable manner.
- 61. The weather conditions will then be assessed by the works supervisor to ensure that the works can be carried out safely. Observations based upon the Beaufort Scale will be employed to determine the approximate wind speed. Should the wind speed exceed the agreed maximum permissible level, the works supervisor will advise the client and no rope access work will be permitted to take place until the speed drops to acceptable levels. The works supervisor will be responsible for establish the maximum permissible wind speeds under which works may be carried out.
- 62. Pre-use checks will be made of all equipment before it is used. Chainsaws, winches and chippers shall only be used by qualified certificated tree surgeons/aborists and they shall only be used in accordance with the manufacturer's instructions and industry best practice guidance.
- 63. All tree surgeons/aborists must wear full chain saw protection including chain clogging trousers/leggings and jackets, plus hard hat, visor and hearing protection.
- 64. All anchor points are to be fully assessed prior to being used, all such anchor points shall generally consist of substantial branches of the tree which show no signs of disease or weakness.
- 65. All tree limbs that are to be removed are to be securely suspended using appropriately rated ropes and pulley's, this is to prevent the branches crashing to the floor, they can then be carefully lowered to the floor from where they can be cross cut into manageable sections for removal from the site.
- 66. An exclusion zone/drop zone shall be established in the area immediately below where the works are to be carried out. No members of the public will be permitted to pass beneath the tree during the works.
- 67. As each branch is lowered to the ground below, it will be cut into smaller manageable sections before being moved and being loaded on the pick-ups. Wheelbarrows and carts will be used to carry and manoeuvre the material to the company pick up trucks.

Working at Height:

- 68. All operatives, plant, equipment, tools and other persons must excluded and kept a safe distance away from the fall zone of any trees that are being felled or worked on.
- 69. All harness anchor points are to be fully assessed prior to being used, all such anchor points shall generally consist of substantial branches of the tree which show no signs of disease or weakness.
- 70. Once all equipment and tools are in place and the ropes are attached securely to the anchor point and the operative, then the operative can begin his ascent.
- 71. All tree limbs that are to be removed are to be securely suspended using appropriately rated ropes and pulley's, this is to prevent the braches crashing to the floor, they can then be carefully lowered to the floor.
- 72. An exclusion zone/drop zone shall be established in the area immediately below where the pruning/felling works are to be carried out.
- 73. The operative(s) undertaking work at height, shall be secured to the tree at all times.
- 74. All tree climbing operations to be carried out in accordance with industry best practice AFAG leaflets 401, 402 and 308. All tree work operations are to be completed with regard for BS3998 recommendations for tree work.
- 75. The harnesses and lanyards must be properly worn by the operatives at all times and securely fixed to a secure anchor point above the operative's head.
- 76. Under no circumstances must any members of the public, visitors or persons employed on the site be permitted within the working area unless accompanied and supervised. Safety helmets must be worn by all persons within this area whilst works are being carried out.
- 77. As each branch is lowered to the ground below, it will be cut into smaller manageable sections before being moved and being loaded on the pick-ups. Wheelbarrows and carts will be used to carry and manoeuvre the material to the company pickup trucks.

Fencing

- 78. Accurately set out the position of each post hole and carry out a services scan, using a cable avoidance tool to check the location of each proposed fence post, prior to it being excavated, also check with the client/site manager for any information relating to known buried services in the working area.
- 79. Post holes are to be excavated at by hand. If any buried services are encountered, they will be carefully exposed using hand tools to avoid any damage to the services or harm to the site operatives. All services should be assumed to be live, unless proved otherwise.

- 80. Once each hole has been excavated to the required depth, the pre-cast concrete or timber post is to be carefully lifted into position within the hole and held level. When using pre-cast concrete posts additional care must be taken when lifting them into position, due to the size and weight of the posts, under no circumstances should a single person attempt to lift a post. The fence posts will be carefully lifted into position within the hole and held level with the use of temporary stakes nailed into the ground and on to the post.
- 81. The hole will then be carefully backfilled around the post, with a concrete lean mix, care must be taken to ensure that the post is not accidentally moved from its intended position.
- 82. All concrete will be thoroughly compacted into position around the posts, with the posts being temporarily propped in the vertical position until the concrete has cured.
- 83. The concrete used for fixing the post in position, will be mixed on site by hand and placed by hand using shovels and wheelbarrows.
- 84. Once each post has been concreted into position, it will be left for a sufficient length of time to enable the concrete to fully cure, this time will depend on the concrete mix, the weather and the ambient temperature. However, as a minimum, no further work should be carried out on the post for at least 24 hours to avoid weakening the concrete.
- 85. Once the post has been securely fixed in position, the timber rails can be fitted to the posts, each of the rails will be nailed to the posts at each end in order to secure them.
- 86. The final stage is to fix the timber feather edge boards to the fence rails, each board will be evenly spaced and secured to the rails using a hammer and nails taking care to avoid hitting hands/fingers.
- 87. The above steps will be repeated until the entire fence is completed.
- 88. In addition to the fencing, gates are also to be incorporated into the fence where necessary.
- 89. At each gate location the two gate posts are to be accurately erected either side of the gate opening, the purpose of these are to both support the ends of the fence panels and to provide secure points onto which the gate hinges and latches may be fixed.
- 90. A services scan, using a cable avoidance tool should be carried out at each of the locations for the gate posts prior to any excavation works being carried out. The site manager will also be contacted for any information relating to known buried services in the working area.
- 91. Post holes are to be carefully excavated by hand using hand tools. Any services should be assumed to be live, unless proved otherwise.
- 92. Once the hole has been excavated to the required depth, the gate posts can be carefully lifted into position within the hole and held level with the use of temporary stakes secured to the post.

- 93. The hole should then be carefully backfilled around the post, with a lean mix concrete, care must be taken to ensure that the post is not accidentally moved from its intended position.
- 94. Once the concrete has cured, any additional fixings can be secured onto the new posts.
- 95. The gates can then be simply lifting onto the hinges and secured into position.
- 96. Care must be taken at all times when lifting and handling heavy materials such as bags of cement, concrete, fence/gate posts and fencing panels. Where necessary 2 man lifting techniques should be adopted with all materials and equipment being transported as close to the working area as possible using mechanical means.
- 97. Trellis will be secured via timber extensions screwed to the top rails.
- 98. On completion of the works, all fixings and bolts should be checked and if necessary, tightened.

Rotovating

- 99. Rotavators are available in different sizes for different applications. Tillers are smaller models, designed specifically for use in the garden and on small allotments. Larger models, such as our medium duty cultivator and our heavy duty hydraulic rotavator, are designed for use on larger plots of land, vegetable patches and fields. These are powerful pieces of professional equipment and they are better equipped for larger jobs.
- 100. Before deciding when to use a rotavator, it is important to take the moisture in the soil into consideration, especially if the soil is compacted, or if it has never been tilled before. Although a rotavator can be used on sandy soil at any time, soils high in clay behave differently when they are wet to when they are dry. When clay soil becomes dry it gets very hard. If the clay soil in your garden or allotment is too hard, using a tiller or rotavator to cultivate the land can be very difficult and the tiller / rotavator may not be able to do more than scrape away at the first couple of inches of soil. If the soil is too wet, it forms clods when tilled. Those clods become like rocks when they dry, and this can ruin the soil until the next winter's weather softens them again.
- 101. If your soil is compacted or has never been tilled before, water it for several hours, three or four days before tilling. Then check to see whether the soil has drained enough to be tilled. You can do this by picking up a handful of soil from the bottom of a 6-inch deep hole and squeezing it into a ball. The ball of soil should be easy to break apart with one finger. If it dents rather than breaks, the soil is still too moist to till.

102. Before rotavating new ground, you should remove any weeds a few days in advance. If you rotavate through weeds, they can get caught in the rotavator's tines and spread around the plot of land.

103. You should rotavate the land in strips, slightly overlapping with the previous strip as you move on to the next strip. Make two or three passes over each strip, and repeat the process at right angles to the original rotavated strips. Don't dig much deeper than two or three inches deep on the first pass. You can then set the rotavator to dig deeper on each pass after that.

Turfing

- 104. **Step 1:** Start from an outside edge and lay the first strip widthways slightly overlapping the boundary (you can trim this back when you have finished). Press carefully to make good soil contact but without squashing the turf.
- 105. **Step 2:** Continue laying adjacent pieces until you have completed the first row of turf along an entire edge.
- 106. **Step 3:** Now start the next row. If you need to stand on laid turf, use a plank to avoid denting or squashing it. It is important to stagger successive rows so that the short edges do not line up (they should alternate like the vertical joins in brickwork).
- 107. **Step 4:** Continue like this, butting and pushing the edges for a tight join but being careful not to stretch the turf.
- 108. **Step 5:** Finally, you need to trim any untidy edges with an old woodsaw or sharp serrated knife but remember to use the planks to avoid walking directly on the turf.
- 109. **Step 6:** Newly-laid turf must be watered well enough for the water to penetrate the soil but without turning it into a mud bath. You can gently pull back a piece to inspect the soil. In hot weather, be sure to water as soon as you have laid your lawn.

Hand Tools

- 110. When ever using hand tools, care must be taken to ensure that the correct tool is used for the job.
- 111. Tools such as sheers should always be well oiled and sharp if they are to be effective.
- 112. Never run whilst holding or using hand tools.
- 113. Never leave hand tools lying around, unsupervised.

Application of Weed Killer

- 114. All operatives are to ensure that they keep a good footing and balance at all times whilst using the applying the product, do not overreach or stretch out as this may result in you losing your balance and falling into the road.
- 115. Keep hands and exposed skin away from discharge point on the sprayer. Always wear protective gloves and footwear as well as coveralls.

- 116. Always wear PPE. Safety footwear EN345, goggles EN166, latex gloves EN388 Do not wear loose clothing. Wear long trousers of heavy material to protect your legs. Do not wear shorts.
- 117. Although the product is non-hazardous and safe to use around animals etc, do not operate or apply the product whilst people or animals are in the immediate vicinity.
- 118. Keep all safety guards in place.
- 119. If the behaviour of the equipment changes, stop work immediately and check the equipment for signs of damage or blockages.
- 120. Application will be made using hand held and push along type sprayers using an approved Herbicide. The handheld equipment uses ultra-low volume application method, which requires no water or oil based carriers. Application rates are as low as 2 litres per hectare of concentrated herbicide. This equipment has a rechargeable battery which will last the whole day and the operative can carry enough material for at least half a day's work at a time.
- 121. All areas will be walked in a methodical manner and the weeds will be treated as the operatives come across them.
- 122. Completion of Works
- 123. Upon completion of the works the area should be tidied up and all tools and equipment removed from the site and placed securely within the company vehicle.
- 124. Where necessary, the use of a power blower should be used to clean down paths, roads and other areas by blowing any cutting onto the grassed areas. The blower should never be used in the vicinity of any member of the public or animal.
- 125. Where weed killer needs to be applied, this will be done in accordance with the attached Risk/COSHH assessments and manufacturers recommendations.
- 126. Prior to leaving site, remove all signage and road cones and load them back onto the company vehicle.
- 127. Wash hands, clean off clothing and advise the site representative that your works are complete and that you will be leaving the site.

GENERAL GARDENING & LANDSCAPING WORKS

RISK ASSESSMENTS

Page 16 of 59

The steps to be taken during the risk assessment process are summarised below:

- 1. Review the task and activities which are to be carried out
- 2. Identify the hazards associated with each task
- 3. Where possible modify or redefine the tasks so as to eliminate the identified hazards
- 4. Where the hazards cannot be eliminated, assess the likelihood and severity of the hazards to give a risk score or risk rating (this is obtained by multiplying the 2 scores together)
- 5. Give further consideration to the management and control of the High and Very High Risks
- 6. Identify the persons affected by the hazards and wherever possible restrict access to those persons carrying out the task, so that others are not affected
- 7. Develop a safe system of work and ensure the appropriate control measures are identified
- 8. Personal Protective Equipment (PPE) should always be provided as the last line of defence
- Ensure information about the hazards, risks and control measures are communicated to those undertaking the work (keep a record of all briefing sessions held with staff – see attached briefing record)
- 10. Ensure a safe system of work is implemented in accordance with the risk assessment and any method statements and permits to work etc
- 11. Ensure adequate supervision is provided to enforce and monitor the effectiveness of the control measures

	ADDITIONAL CONTROL MEASURES							
In	formation/Instruction/Training	Managerial Controls						
A A A A A	All operatives should be informed of the hazards and instructed on the required safe systems of works and control measures All operatives to be provided with appropriate PPE and trained in its use and application Where the risk of hearing damage has been assessed as being high, all operatives should be trained and informed of the risks and irreversible damage that may be caused by exposure to noise Operatives to be informed of the requirement for mandatory hearing protection when using any equipment whose noise levels are above 85dB(A) and of the need to ensure the appropriate protection is worn at all times Where to obtain the appropriate PPE/hearing	 Ensure adequate supervision is provided and that control measures remain valid for the duration of the work Ensure appropriate safety equipment and PPE are made available Managers to ensure all safeguards are in place and that the appropriate PPE is provided and used Where employees are regularly exposed to high levels of noise, consider the need for appropriate Health Surveillance measures 						

ADDITIONAL CONTROL MEASURES

Information/Instruction/Training	Managerial Controls
protection and how to use it correctly	

Physical Controls	Procedural Controls				
 Mandatory hearing protection signs to be fixed to all equipment where noise levels are likely to exceed 85dB(A) Ensure that all equipment is regularly serviced, well lubricated and maintained to reduce the levels of noise generated 	 When selecting and procuring plant, tools and other equipment, consideration will be given to procurement of low noise equipment wherever possible Where individual operatives are exposed to high levels of noise, limit their exposure to the noise by restricting the duration of their exposure – rotate different the people used so that no one spends an excessive amount of time exposed to the noise Ensure all plant and machinery is properly maintained and serviced to help reduce the noise caused by poorly maintained and worn equipment Ensure that where applicable, silencers are fitted to plant and machinery 				

HSE & Other Guidance	Comments						
 INDG362 Noise at Work The Control of Noise at Work Regulations 2005 	Most plant, power tools and machinery are likely to generate noise in excess of the second action level (85dB(A)), this therefore means that hearing protection must be provided and used whilst using such equipment

ADDITIONAL CONTROL MEASURES							
Information/Instruction/Training	Managerial Controls						
 All operatives should be informed of the hazards and instructed on the required safe systems of works and control measures All operatives to be provided with appropriate PPE and trained in its use and application All staff to be informed of the potential hazards to their health from contact with hazardous substances All staff who are considered to be at risk should be provided with instruction on the precautions to be taken when using and handling such substances All staff who are considered to be at risk should be provided with instruction on how to safely clean up and dispose of any potentially hazardous substances All staff to be informed that a specific COSHH assessment must be completed for every potentially hazardous substance 	 Ensure adequate supervision is provided and that control measures remain valid for the duration of the work Ensure appropriate safety equipment and PPE are made available Managers to ensure all safeguards are in place and that the appropriate PPE is provided and used 						

Physical Controls	Procedural Controls					
 Substitute any substance with an equally effective but less hazardous material wherever possible A written COSHH risk assessment must be completed for any hazardous substances retained or used in the workplace Staff must be made aware of, and adhere to the control measures on the specific COSHH/risk assessments The COSHH/risk assessments need to be reviewed on a regular basis Contractors must not be allowed to bring chemicals onto the premises unless they have undertaken an assessment of risk and have adequate control measures in place to reduce those risks Suitable PPE must be provided and worn where the COSHH assessment determines this to be necessary All substances must be adequately and securely stored 	 All hazardous substances must be identified. Any substance that is no longer in use must be disposed of safely, and in accordance with information on the Material Safety Data Sheet (MSDS). A MSDS must be obtained for every hazardous material used in the workplace. The need to use hazardous substances must be eliminated wherever possible. 					

HSE & Other Guidance	Comments					
 INDG136 COSHH: A Brief Guide to the Regulations COSHH essentials: Easy steps to control chemicals. Control of Substances Hazardous to Health Regulations HSG193 Control of substances hazardous to health. The Control of Substances Hazardous to Health Regulations (as amended). Approved Code of Practice and guidance L5 	This assessment is not substance specific and a specific COSHH Assessment must be carried out for all hazardous substances used in the workplace.

ADDITIONAL CONTROL MEASURES										
Information/Instruction/Training	Managerial Controls									
All persons to be trained in basic ladder safety, including use, inspection and safety measures whilst working from ladders and at height	Ensure adequate supervision is provided and that control measures remain valid for the duration of the work									
Physical Controls	Procedural Controls									

Physical Controls	Procedural Controls						
 Ladders to be securely tied off to prevent slippage and movement Where a ladder cannot be tied or secured in any other way, it will be securely footed by another operative If a ladder is being used to access a working platform the ladder shall extend 1.05m above the platform level 	 Use of ladders will only ever be used for short duration work (<20 minutes) where no viable alternative is available Podium steps and tower scaffolds should always be selected in preference to ladders or step ladders Damaged ladders shall be removed from site immediately The painting of ladders shall not be permitted as this 						

Physical Controls	Procedural Controls
 The correct angle for a ladder is 75° or at a slope of 1:4 Overreaching from ladders shall not be permitted 3 points of contact to be maintained with the ladder at all times 	

HSE & Other Guidance	Comments						
 HSE Guidance Note – Safe Use of Ladders, Stepladders and Trestles Work at Height Regulations 2005 	*

ADDITIONAL COM	NTROL MEASURES					
Information/Instruction/Training	Managerial Controls					
 All operatives should be informed of the hazards and instructed on the required safe systems of works and control measures All operatives to be provided with appropriate PPE and trained in its use and application Specific training in the use of the harness, lanyard and associated system should be provided to all those using the equipment, this should include: How to wear the harness and adjust it to the body How to manage the lanyard and other equipment How to fall so as to minimise injury How to self rescue or assist others after a fall 	 Ensure adequate supervision is provided and that control measures remain valid for the duration of the work Ensure appropriate safety equipment and PPE are made available Ensure that those carrying out the works are fit and healthy No lone working to be permitted 					

ADDITIONAL CONTROL MEASURES			
Information/Instruction/Training	Managerial Controls		
 How to inspect the equipment and recognise significant defects How to assemble the system correctly, including recognition of the importance of safe anchorages 			

Pł	nysical Controls	Pr	ocedural Controls
\checkmark	All equipment to be thoroughly check and inspected prior to use	A	Ensure that consideration is given to how a person can be rescued after an arrested fall
۶	Damaged equipment is to be taken out of use immediately and reported to the supervisor		Ensure that all anchor points have been thoroughly tested and inspected and are suitable for use
\blacktriangleright	Wherever practical, the lanyard is to be clipped on to a secure anchor point at head height to reduce the fall distance	\checkmark	Ensure that all harnesses and lanyards are properly stored in an warm dry area, where they are unlikely to get damaged

HSE & Other Guidance	Comments
 Personal Protective Equipment at Work Regulations Work at Height Regulations PPE against falls from height. Lanyards BS EN 354 PPE against falls from height. Full body harnesses BS EN 361 PPE against falls from height. Fall arrest systems BS EN 363 PPE against falls from height. Energy absorbers BS EN 355 	The use of safety harnesses and fall arrest systems should always be the last choice for providing protection against falls from height
